PalmSHIELD ABOUT US

For over fifty years, **PalmSHIELD** has led the industry in designing and manufacturing. We offer the widest selection of louvered, solid, semiprivate, staggered, perforated, woven wire, and custom laser-cut systems – engineered to meet UBC and IBC wind load codes.

Our products are designed for ease of installation, with complete fabrication and field assembly drawings provided. From premium structural systems requiring no additional support to cost-effective louvers built for quick assembly, **PalmSHIELD** delivers solutions for every project and budget.

Dedicated to exceptional service, our project management team provides weekly updates with photos to ensure clear communication from start to finish. **PalmSHIELD** is proud to be recognized for both product excellence and outstanding customer experience.

PROJECT MANAGEMENT

Every screening project is assigned a dedicated project manager who provides Day One contact, weekly updates, fabrication drawings, timely follow-ups, and photos prior to shipment.

PROJECT DESIGN

PalmSHIELD's design and engineering team provides site-specific support and detailed fabrication drawings for your screening system, submitted for your approval.

PROJECT ENGINEERING

PalmSHIELD's screening systems are fully engineered, supported with engineering documents and project-specific stamped drawings from a local engineer.

FABRICATION & COATING

As custom metals fabricators, we combine our 80,000 sq. ft. facility with hands-on attention to your enclosure, backed by daily quality control and a Certified Weld Inspector (CWI).

INSTALLATION

PalmSHIELD's installation teams have over twenty years of experience and have completed projects in most major metropolitan areas.

TRANSPORTATION

PalmSHIELD has shipped hundreds of projects nationwide, partnering with trusted carriers and maintaining constant communication to ensure timely, reliable delivery.

GROUND SCREENS

After almost twenty years, **PalmSHIELD** has redesigned their panel framework and column profiles, providing considerable enhancements. From custom infill materials to a variety of finishes, we've got you covered. Whether your project requires a modern aesthetic or a blend with natural surroundings, **PalmSHIELD** Elite delivers unmatched versatility. All panels can be use for rooftop screens as well.

FORTE

PRODUCT LINE

PalmSHIELD ROOFTOP SCREENS

PalmSHIELD’s Forte Rooftop Screening is the ultimate engineered solution for rooftop enclosures. Combining strength, simplicity, and modern design, Forte is built like a fortress, using industry-proven structural profiles. It is engineered to withstand wind speeds of up to 150 mph, ensuring your equipment is protected even in extreme conditions.

INSTALLER-FRIENDLY ASSEMBLY

Minimal parts and a streamlined installation process.

ECONOMIC SOLUTIONS

Utilizes industry-standard panel sizes to keep costs low.

CODE & STANDARD COMPLIANT

Meets all local building codes, including wind and fire resistance requirements.

ENGINEERED FOR DURABILITY

Withstands wind speeds of up to 150 mph.

PROJECT SPECIFIC ENGINEERING

Tailored solutions to meet unique project requirements.

NO ROOFTOP PENETRATION REQUIRED

Minimal parts and a streamlined installation process.

ROOFTOP SCREENS

All color options can be seen starting on page 108
All panels can be use for ground screens as well.

FORTE PRODUCT LINE

PalmSHIELD Forte is the revolutionary rooftop screen design. Used to obscure and protect RTU equipment, it can be attached either to your rooftop or directly to the equipment itself.

ROOFTOP MOUNTED STRUCTURAL ANALYSIS SUMMARY

MEMBER DETAILS

All structural members use 6061-T6 aluminum angle sections:

- M1, M5: L3"x3"x0.25", 72" long
- M2, M6: L3"x3"x0.25", 36" long
- M3, M7: L2.5"x2.5"x0.25", 80.498" long
- M8: L2"x2"x0.25", 6' long (appears in both configurations)

CRITICAL LOAD CASE

All members are governed by Load Case 5: D+0.6W (Dead + 60% Wind Load)

STRUCTURAL PERFORMANCE

Maximum stress ratios (lower is better, must be <1.0):

- Configuration 1: 0.742 (Member M7)
- Configuration 2: 0.776 (Member M3)

Both designs are structurally adequate with all stress ratios below 1.0.

KEY ENGINEERING CHECKS PERFORMED

- Bending stress (primary concern)
- Shear stress
- Deflection limits (all well within L/300+ ratios)
- Buckling analysis using AA ADM1-15 (Aluminum Design Manual)

DESIGN LOADS AND CALCULATIONS

The hand calculations show:

- Wind pressure calculations for 150 mph exposure
- Moment calculations for the T-post configuration
- Member capacity checks against applied loads

PROFESSIONAL CERTIFICATION

The calculations are properly sealed and certified by a licensed Professional Engineer, meeting regulatory requirements for structural design.

EQUIPMENT MOUNTED STRUCTURAL ANALYSIS SUMMARY

MEMBER DETAILS

All structural members use 6061-T6 aluminum
angle sections:

PRIMARY STRUCTURAL MEMBERS:

M10: L2"x2"x0.25", 51.614" long

M11: L2"x2"x0.25", 51.614" long

M12: L2"x2"x0.25", 42" long

M13: L2"x2"x0.25", 42" long

M14: L3"x3"x0.25", 60" long

M14A: L2"x2"x0.25", 42" long

M15-M23: Various L2"x2"x0.25" members
with different lengths

CRITICAL LOAD CASE

Load Case 5: D+0.6W (Dead + 60% Wind Load)
governs all members

-STRUCTURAL PERFORMANCE

Maximum stress ratios (lower is better,
must be <1.0):

M21: 0.686 (highest stress ratio)

M16: 0.682

M14: 0.490

M15, M17: 0.430 each

M20, M22: 0.371 each

M19, M23: 0.323 each

M14A, M18: 0.303 each

KEY ENGINEERING CHECKS PERFORMED

Bending stress (primary concern for most members)

Shear stress

Deflection limits (all well within acceptable ratios
>L/760)

Buckling analysis using AA ADM1-15 (Aluminum
Design Manual)

DESIGN LOADS AND CALCULATIONS

The hand calculations show:

Wind pressure calculations for 150 mph exposure

Moment calculations for the T-post configuration

Member capacity checks against applied loads

PROFESSIONAL CERTIFICATION

The calculations are properly sealed and certified
by a licensed Professional Engineer, meeting
regulatory requirements for structural design.

BATTEN

PRODUCT LINE

PalmSHIELD ELITE BATTEN SCREENS

Vertical aluminum open style (without solid backing) batten panels create a clean, modern appearance with strong linear definition and visual height enhancement. Ideal for architectural screening and decorative applications, vertical battens provide an upscale contemporary aesthetic while maintaining airflow and partial visibility through the panel system. These panels allow increased airflow, visibility, and dimensional depth. This design creates a lighter architectural appearance while still providing partial screening and visual concealment.

PalmSHIELD sublimation finishes combine the durability of aluminum with the realistic appearance of natural wood, stone, and metal textures. Using an advanced sublimation process, each finish is permanently transferred into the aluminum coating system to create a highly durable, fade-resistant architectural finish with exceptional visual realism.

WITHSTANDS HIGH WINDS

Engineered to withstand wind speeds of up to 150 mph.

180 MPH

Achieve up to 180 mph wind speeds with additional supports

PARKING GARAGE

PRODUCT LINE

PalmSHIELD PARKING GARAGE SYSTEM

PalmSHIELD’s architectural parking garage screening systems bridge the gap between functionality and design. Engineered to meet ventilation requirements while maintaining sleek architectural appeal, our screening systems enhance curb appeal, boost security, and protect your structure—all without compromising airflow.

Your Parking Garage Deserves More Than a Basic Screen.
Choose **PalmSHIELD** for premium parking garage screening systems engineered for beauty, airflow, and structural integrity. From concept to installation, we’ll help you design a solution that elevates your entire building facade.

Our system provides the following:

ENGINEERED STRENGTH

Including for high wind loads

CLEAN ARCHITECTURAL LINES

Consistent reveals, high-quality finish to complement building profiles.

NUMEROUS MATERIALS

(Architectural louvers, perforated, etc.) and custom color options to match building designs.

GARAGE

PARKING GARAGE SCREENS

GARAGE SYSTEMS

ARCHITECTURAL PARKING
GARAGE SCREEN SYSTEMS

Built Into the Structure
Flush, integrated finish

- 1 Wall sleeve
- 2 Flange

Mounted Over the Structure
Smooth finish, any surface

- 3 Bracket
- 4 Adjustable

Mounted Off the Wall
Sleeve standoff, any wall

- 5 Wall sleeve
- 6 Standoff

They all use the same panel styles and materials - the difference is how they meet your structure.

This system uses heavy duty brackets to *mount directly to and offset panels from* the concrete structure.

- 1 Concrete Wall
- 2 Louver Panel
- 3 Panel Bolts and Washers
- 4 Wall Anchors
- 5 Wall Mounting Bracket

INFILL PANEL

Panel is sized and set directly between concrete structural posts, sitting flush with the building face. Engineered as part of the opening.

SURFACE PANEL

Panel mounts on standoff brackets over your existing wall or facade. No structural changed needed to upgrade an existing garage.

Designed for installation *between pillars*, this system uses wall sleeves to anchor panels to the concrete structure.

UPGRADE EXISTING PARKING STRUCTURES

Retrofitting existing gaps

PalmSHIELD screens can be installed directly on existing infrastructure—no major reconstruction required. Improve appearance and safety while extending the life of older garages.

TRANSFORM YOUR STREET PRESENCE

Street-level facade wrap

PalmSHIELD's versatile screening systems adapt to new construction or existing structures—from downtown façades to retrofit installations—for visual consistency and long-term durability.

TURN YOUR GARAGE INTO A DESIGN ELEMENT

Enhance your branding

With options for custom colors, laser-cut infills, and illuminated panels, **PalmSHIELD** gives you the power to align your garage façade with your brand's architectural identity.

VISUAL CONTINUITY

Turn ordinary openings into design statements. **PalmSHIELD** Elite's precision reveals, refined finishes, and customizable infill options provide a seamless, high-end aesthetic that complements any building façade.

VENTILATION & AIRFLOW

Our perforated and louvered panels protect while allowing natural airflow. **PalmSHIELD** screening systems help you meet ventilation standards while keeping your garage open, safe, and efficient.

VersaLOUVER™

CONTINUOUS LOUVER SYSTEM

PalmSHIELD VersaLOUVER™ SYSTEM

PalmSHIELD's VersaLOUVER™ redefines architectural screening with a patent-pending continuous louver system that combines striking aesthetics with superior performance. Designed to eliminate visible frames, brackets, and thousands of fasteners, VersaLOUVER™ delivers a seamless free-floating appearance while simplifying installation, maximizing design flexibility, and providing engineered structural performance for demanding commercial applications.

CONCEALED ATTACHMENT SYSTEM

No exposed hardware.

CONTINUOUS ARCHITECTURAL APPEARANCE

Free-floating blade design.

THREE-STEP INSTALLATION

Installs dramatically faster.

FULLY FABRICATED

Per your system design

STRUCTURAL PERFORMANCE

Engineered up to 150 MPH.

EASY BLADE REPLACEMENT

Replace one louver instead of the entire system.

VERSALOUVER

IDEAL APPLICATIONS

In all colors from composite, vinyl, powder coat, metal, stone and wood finishes [starting on page 108](#)

VersaLOUVER™ SYSTEM

VersaLOUVER hides the structural attachment system behind the louvers, giving architects the clean, seamless look they want—no exposed brackets, frames, or fasteners.

Louvers can be angled upward for rooftop structures to conceal HVAC equipment from view, or angled downward for ground-level screening applications.

- UNIVERSAL CLAMPING**
All louvers lock simultaneously.
- FIELD ADJUSTABLE**
Move, reposition, shorten or splice during installation.
- NO FIELD CONFIGURATION**
Provide custom drawings to your field application.

FEATURE	VersaLOUVER™	ELITE PANELS	FORTE ROOFTOP	WALL-MOUNTED

Barrier
**VEHICLE
BARRIER**

AKINITOS™

PRODUCT LINE

PalmSHIELD CRASH RATED

Akinitos™ combines **PalmSHIELD**'s industry-leading Elite architectural equipment screening with integrated Black Security Products passive cable barrier technology to create a single system that conceals critical infrastructure while defending it against vehicle threats. Unlike traditional crash barriers, Akinitos delivers certified perimeter protection without sacrificing the architectural appearance of your facility.

Akinitos™ is not simply a vehicle barrier or an architectural screen. It is a fully integrated perimeter security system that combines **PalmSHIELD**'s Elite architectural screening with Black Security Products' ASTM-certified passive cable barrier technology.

Unlike traditional perimeter barriers that remain fully exposed, Akinitos™ integrates the passive cable barrier directly into **PalmSHIELD**'s Elite screen system.

The cable barrier is concealed behind the architectural panels while heavy-duty structural end posts absorb and transfer impact forces during a vehicle collision.

The result is a cleaner architectural appearance without compromising certified crash performance. The engineering drawing shows the M30 P1 cable barrier installed behind the panel system and anchored within the structural end posts, illustrating how the integrated system functions.

CRASH RATED

CRASH RATED SCREENS

All color options can be seen starting on page 108.

AKINITOS™ PRODUCT LINE

Black Security Products and PalmSHIELD have teamed up to provide both crash proven technology and industry best screening options for your site's limited mechanical equipment assets and high security access points.

PalmSHIELD ACOUSTIC SCREENS

Industrial Acoustic Screening for Maximum Noise Control
Engineered Sound Barriers for Rooftop Equipment, Generators, and Commercial Spaces

PalmSHIELD’s acoustic screens are purpose-built to reduce industrial and mechanical noise, delivering both performance and aesthetics. Designed for commercial rooftops, generators, HVAC systems, and mechanical yards, our noise-reduction solutions meet municipal codes and exceed expectations.

**ASTM C423
STANDARDS**

Minimal parts and a streamlined installation process.

**POST FIRST
INSTALLATION**

A variety of designs to match your building’s exterior.

**DUAL SIDED
FINISH**

Withstands wind speeds of up to 150 mph.

**ADAPTIVE
ALIGNMENT**

Utilizes industry-standard panel sizes to keep costs low.

Discover the innovative features that make our Forte rooftop screening solutions the perfect combination of durability, functionality, and style.

PalmSHIELD PEDESTRIAN GATES

PalmSHIELD Vulcan full-height pedestrian swing gates are the ultimate solution for secure access in high-traffic environments. Designed to withstand constant use while maintaining a sleek appearance, Vulcan gates provide the perfect balance of durability, security, and visual appeal. Ideal for both commercial and industrial applications, these gates ensure controlled access without compromising aesthetics.

Secure, Customizable Pedestrian Gate Solutions

With a range of customizable features and a variety of infill options, **PalmSHIELD** gates provide the ultimate security without compromising on style.

Protecting Educational Campuses, Industrial Sites, Stadiums & More

Every site has unique security needs, so Vulcan pedestrian swing gates are fully customizable. From schools and stadiums to apartments and manufacturing plants, they're tailored to balance security and aesthetics.

WIDE ARRAY OF INFILL DESIGNS & MATERIALS

Choose from a variety of designs including louvered, privacy, semi-privacy, picketed, and welded wire mesh.

COMPLETE, PRE-ASSEMBLED GATE

Ships fully assembled with all hardware and access control devices pre-installed, saving time and ensuring ease of installation.

CUSTOMIZABLE TO YOUR SITE

Vulcan gates can be customized in terms of size, height, and style to fit perfectly into your environment.

COMPREHENSIVE ACCESS CONTROL OPTIONS

Includes features such as panic bars, automatic closures, electric strikes, keyless entry, and position switches for enhanced security and convenience.

SEAMLESSLY INTEGRATED WITH PALMSHIELD SCREENING

Vulcan gates can be incorporated into any of PalmSHIELD's architectural louvered screen fencing, offering a cohesive and secure perimeter solution.

MEETS IBC BUILDING CODES

Vulcan pedestrian swing gates are designed to meet the International Building Code (IBC), ensuring compliance with safety and structural standards for commercial and industrial applications.

GATE HARDWARE

GORILLA HINGE 3000

PalmSHIELD has designed its own line of industrial hinges strong and flexible enough to pair with any gate.

DROP ROD

PalmSHIELD can fit any gate with the perfect sized drop rod to secure it in place.

LOCINOX LATCH

PalmSHIELD incorporates the Locinox FortyLock mortise lock into all of our gates with lockable drop rods.

SHIMS

PalmSHIELD offers shims in two styles to be installed individually or in combination.

BOTTOM ROLLER SLIDE GATE

PalmSHIELD provides bottom rollers for cantilevered gates to ensure weight support and a smooth sliding system.

TOP ROLLER SLIDE GATE

PalmSHIELD guarantees an easy & smooth sliding gate. When paired with bottom rollers, these top roller gate components get the job done!

TRUCK MOUNTING BRACKET

Secures gate rollers with a compact, clean design. Precision-cast bracket and sturdy U-bolt provide a tight, vibration-resistant fit for round or square posts.

PANIC BARS

PalmSHIELD utilizes DAC Industries, Inc. for their wide selection of panic bar options. You can find one that's perfect for your project with their reliable and versatile product lines.

LOCINOX VENUS

The Venus is a plug-and-play motorized gate closer for pedestrian swing gates.

ACCESS

PRODUCT LINE

PalmSHIELD ACCESS CONTROL

Selecting the Right Access Control System

Choosing the right access control for a slide gate can be challenging. Gate length, type, and weight determine the operator, while designers must also select the supporting devices, safety equipment, and plan a layout that ensures all components work seamlessly with the gate and opening.

Simplified Automation Solutions

PalmSHIELD partners with American Access Company to provide simplified, comprehensive drawings and specifications for slide gates and automated access control. AAC, a leading Midwest provider, installs over 500 systems annually and employs 14+ AFA-certified technicians.

TURNKEY ACCESS CONTROL

Complete, ready-to-install systems – including gates, gate operators, and access control components.

SEAMLESS INTEGRATION WITH SLIDE GATES

Engineered for compatibility with chain link or ornamental cantilever gates.

CUSTOMIZABLE SYSTEM PACKAGES

Single or double track gate options to fit any opening size or application.

COMPREHENSIVE CAD DRAWINGS & SPECIFICATIONS

Pre-engineered drawings to ensure seamless installation and code compliance.

CERTIFIED INSTALLATION INSTRUCTIONS

Step-by-step guidance for gate operators, access controls, and all wiring diagrams.

OPERATOR AND ELECTRICAL PRE-WIRE LAYOUTS

Eliminates guesswork – every system is pre-mapped for streamlined installation.

ACCESS GATES

ACCESS PRODUCT LINE

Protect your property with durable, secure, and streamlined gate and access control systems.

RAILINGS

PRODUCT LINE

PalmSHIELD HIGH CLASS RAILINGS

PalmSHIELD cable systems are designed to be accompanied with code compliant stair grab rails. All of our sections are custom fabricated. PalmSHIELD uses a rigid, thin cable stabilizer bar in the panels to support the long cable runs. At changes in slope, a stabilizer bar will support the cables without the use of additional posts. Fewer posts leaves more to be desired as you look beyond the cable rail system.

ARCHITECTURAL EXCELLENCE WITH MODERN DESIGNS

Unique designs like single-cable routing, field-adjustable hinges, and traditional post-and-rail ensure a solution for every project.

ENGINEERED FOR STRENGTH & COMPLIANCE

Pre-installed cables, bottom rail support, and optimized post spacing prevent system failure.

EFFORTLESS INSTALLATION & MAINTENANCE

Minimizes installation time with a flawless, factory-assembled system & eliminates concerns over cable tensioning, post failures, and long-term stability.

VERSATILE INFILL OPTIONS & CUSTOM FABRICATION

Choose from modern cable rail or heavy-duty aluminum/steel bar grating for added depth and strength.

HIGH CLASS RAILINGS

RAILINGS PRODUCT LINE

PalmSHIELD cable systems are designed to be accompanied with code compliant stair grab rails. All of our sections are custom fabricated.

PALMSHADE

PRODUCT LINE

PalmSHADE SUN SHADES

Simplified Automation Solutions

PalmSHADE leads in custom sun shade structures, designed to fit your site and expertly fabricated for lasting performance. PalmSHADE has everything from pergolas to pavilions— which are ideal for hotels, parks, public gardens, resorts, and multi-family residences. Beyond UV protection, they enhance your space with elegance and can even boost property value— fully customizable and seamlessly installed to your needs.

COMPLETELY CUSTOMIZABLE

Most projects require more than standard solutions, and that's where we excel. Our team specializes in custom, project-specific designs, working closely with architects and designers to bring unique visions to life. Let PalmSHADE transform your ideas into tailored designs that elevate your project.

INNOVATIVE DESIGNS

Our sun shades encompass shelters, pool cabanas, kiosks, bus stop shades, steel pavilions, gazebos, pergolas, and more. With 25 years of collaboration with architects and engineers, we offer a diverse range of innovative shade solutions. Explore our extensive selection to find the perfect design for any setting.

CUSTOM TAILORING

Make our design your exclusive design tailored to your project. We transform standard sun shade structures and screening into one-of-a-kind works of art that complement your site as a cornerstone of your design. From ordinary to extraordinary, we're committed to making your vision reality.

DESIGN TO FABRICATION

Our engineering team transforms your napkin sketch into detailed 3D renderings, allowing customers to visualize the aesthetic impact on their project. Experiment with sizes, shapes, colors, and configurations before finalizing your design for fabrication. See your vision come to life before construction begins.

PalmSHADE RETRACTABLE CANOPIES

Comfort style and durability

Looking to take your sun shade to the next level? Browse PalmSHADE’s canopy options. From retractable canopies, retractable side screens, tensions sails, and more, we’ve got you covered!

Crafted comfort for curated outdoor experiences

The first and only slide-on-wire canopy system that is ready to install out of the box, and because of its unique modular design it can fit any space and be easily modified to meet your design and shade needs.

CUSTOM COLORS

Design your canopy with single or multi-color options for a custom look.

PANEL OPTIONS

Choose uniform or varied panel widths to match your style or space needs.

TENSION CONTROL

Adjust panel tension for a sleek, flat look or a soft, billowed effect.

PANEL FLEXIBILITY

Lock panels in place for consistent shade, or remove them for an open-air feel.

PRIVACY & SHADE

Add vertical end panels for enhanced privacy and extended shade.

FULL CONTROL

Open or close your canopy from either end—full control at your fingertips.

INDOOR STYLING

Install indoors to conceal exposed ceilings, rafters, or ductwork with style.

EXPAND FUNCTIONALITY

Expand functionality with accessories and upgrades (coming soon).

BOLLARDS

PRODUCT LINE

PalmSHIELD SECURITY BOLLARDS

Visual Boundaries, Physical Protection, and Traffic Control

PalmSHIELD’s security bollards provide heavy-duty protection and property definition for a wide range of commercial and municipal uses. From traffic management to high-impact crash protection, our steel and aluminum bollards are built to last.

Mark Perimeters, Deter Vehicles, and Enhance Curb Appeal

Explore the cutting-edge features of the PalmSHIELD Elite framework – crafted to deliver the ultimate blend of strength, versatility, and contemporary design for any screening application.

VARIETY OF SHAPES & SIZES

Available in multiple diameters and styles to provide the perfect balance of protection and aesthetics.

CUSTOMIZABLE TOP OPTIONS

Choose from a range of decorative top finishes to complement your architectural vision—no extra fasteners needed.

MULTIPLE INSTALLATION TYPES

Designed for flexibility, our bollards support embedded, surface-mounted, and removable installation methods.

DESIGNED TO MATCH ARCHITECTURAL SCREENING

Seamlessly integrate with PalmSHIELD screening systems for a uniform and polished appearance.

DURABLE & WEATHER-RESISTANT

Constructed from high-quality materials to withstand impact, corrosion, and extreme weather conditions.

VERSATILE APPLICATIONS

Ideal for pedestrian safety, traffic control, perimeter security, and decorative enhancements.

SECURITY
BOLLARDS

BOLLARDS
PRODUCT LINE

PalmSHIELD Forte is the revolutionary rooftop screen design. Used to obscure and protect RTU equipment, it can be attached either to your rooftop or directly to the equipment itself.

COLLAPSIBLE BOLLARDS

Our Collapsible bollards are available in two materials: Schedule 40 Steel and Steel Square. Choose between three different bollard heights: 36", 42", and 48". As well as different diameter widths: 3.5", 4.5", 6.625", 10.75", 12.75"

CRASH RATED BOLLARDS

The M50 Bollard is a high-security vehicle barrier designed to provide exceptional stopping power against unauthorized vehicle access. Rated to withstand impacts from heavy-duty vehicles traveling at high

speeds, the M50 Bollard is engineered to protect high-risk areas such as government buildings, data centers, and other critical infrastructure.

EMBEDDED BOLLARDS

Our Embedded bollards are available in two materials: Schedule 40 Steel and Steel Square. Choose between three different bollard heights: 36", 42", and 48" as well as different diameter widths: 3", 4", 6", 10", 12"

REMOVABLE BOLLARDS

Our Removable bollards are available in two materials: Schedule 40 Steel and Steel Square. Choose between three different bollard heights: 36", 42", and 48" as well as different diameter widths: 3", 4", 6", 10", 12"

SURFACE MOUNTED BOLLARDS

Our Surface Mounted bollards are available in two materials: Schedule 40 Steel and Steel Square. Choose between three different bollard heights: 36", 42", and 48" as well as different diameter widths: 3", 4", 6", 10", 12"

COLOR CHOICES

PalmSHIELD CHOOSING COLORS

The following pages showcase our full range of color options across every product line. Our Aluminum Powder Coat Colors deliver a durable, corrosion-resistant finish for residential and commercial fencing, with choices spanning classic black and bronze to custom architectural colors. We even offer custom color finishes as well. For projects calling for the warmth of natural materials without the upkeep, our Metal, Wood & Stone collection uses an advanced sublimation process to permanently infuse realistic wood grain, stone texture, and metallic finishes into the aluminum substrate—giving architects the aesthetic versatility they need while preserving aluminum’s structural performance and long-term durability.

Vinyl fencing and standard Powder Coat colors remain popular for residential installations, offering cost-effective, low-maintenance solutions for homeowners. Meanwhile, the sublimated Metal, Wood & Stone and Modern Contemporary lines give architects a broader design vocabulary for projects demanding a more custom or upscale material appearance—all detailed in the color selections that follow.

COMPOSITE COLOR CHART

Our Composite color palette brings the natural texture and grain of wood to vinyl fencing, without the maintenance that real wood demands. From the warm neutrality of Adobe to the deep, rich tones of Chestnut and Mocha Walnut, each color is designed to complement a wide range of architectural styles and exterior palettes. The cooler Dark Gray and Lite Gray options offer a more contemporary look, giving homeowners the flexibility to match fencing to the surrounding landscape, building materials, or overall design aesthetic.

VINYL COLOR CHART

Our vinyl color palette offers a broad range of finishes, from realistic wood grain textures to clean, solid tones, giving homeowners the freedom to match any exterior style. Wood-inspired options like Aspen Latte, Green Teak, and Mocha Walnut bring warmth and natural character to a fence line, while Chai Gray and Dark Gray offer richer, more contemporary alternatives. For a more traditional or minimalist look, solid shades like Tan, Lite Gray, and classic White provide timeless versatility that complements virtually any home.

POWDER COAT COLOR CHART

Our powdercoat finish is available in an extensive range of RAL colors, giving architects and homeowners near-limitless flexibility to match any exterior palette or design vision. From timeless neutrals like Jet Black, Signal White, and Grey Aluminum to bold accent options across the yellow, red, blue, and green families, this palette supports everything from traditional fence lines to distinctive architectural statements. Each color delivers the same durable, corrosion-resistant protection, ensuring long-term performance no matter which shade is specified.

MODERN CONTEMPORARY COLOR CHART

Our vinyl color palette offers a broad range of finishes, from realistic wood grain textures to clean, solid tones, giving homeowners the freedom to match any exterior style. Wood-inspired options like Aspen Latte, Green Teak, and Mocha Walnut bring warmth and natural character to a fence line, while Chai Gray and Dark Gray offer richer, more contemporary alternatives. For a more traditional or minimalist look, solid shades like Tan, Lite Gray, and classic White provide timeless versatility that complements virtually any home.

MODERN TEXTURED COLOR CHART

From brick and wood to stone, slate, metal, and bamboo, our faux wall panels deliver the natural beauty of authentic materials without the weight, cost, or complexity. Each collection is designed to be lightweight, durable, and easy to install – perfect for both DIY enthusiasts and professional projects, indoors or out. Whether you’re transforming a retail space, building a backyard tiki bar, or remodeling a room, our versatile panel lines offer an affordable, low-maintenance way to bring texture and character to any space.

SUBLIMATION FINISHES

At first glance, it seems almost impossible: a panel that looks exactly like natural wood grain, weathered stone, or rustic corten steel, yet performs like industrial-grade aluminum built to withstand decades outdoors. The secret isn't paint, and it isn't a printed sticker or laminate that will eventually peel, fade, or bubble in the sun. It's a specialized manufacturing process called sublimation over powder coat, a technique that fuses photorealistic pattern with real, lasting protection at a molecular level.

Rather than applying a finish on top of the panel, this process infuses the pattern directly into the coating itself. The result is a surface that carries the authentic texture and color of natural materials while retaining the strength, weather resistance, and longevity that only powder-coated aluminum can offer. Below, we show the finish options and break down exactly how it's done, from raw aluminum prep to the final infused finish.

METAL

STONE

WOOD

How Do We Create Such Beautiful and Durable Finishes?

The Process

Sublimation over powder coat process. Used for woodgrain, metal or stone finishes on our panels.

Here's how we do it:

Aluminum Surface Prep

The raw aluminum is cleaned and prepped:

- Degreasing (remove oils, contaminants)
- Chemical etching or conversion coating (improves adhesion and corrosion resistance)

Base Powder Coating (This step is critical for long-term outdoor durability)

A powder coat layer is applied and cured:

- Typically a light base color (beige, tan, gray) depending on the final pattern
- Electrostatic powder application
- Oven cure (usually ~350-400°F)

Printed Transfer Film Preparation

(This base coat becomes the layer that will accept the sublimation pattern.)

Using a special printed film

- The wood/stone/metal pattern is printed with sublimation ink onto a heat-stable plastic film
- Patterns are engineered to:
 - Repeat seamlessly
 - Align across panels if needed

Wrapping the Panel

Now the panel is physically wrapped:

- The printed film is placed around the aluminum panel (pattern facing inward)
- Edges are taped or sealed
- The panel + film assembly is inserted into a vacuum bag (or membrane system)

Vacuum Sealing

- Air is evacuated from the bag
- Atmospheric pressure force the film tightly against every surface

This ensures:

- No air gaps
- Sharp pattern transfer
- Full contact even on textured or extruded shapes

Heat Transfer (Sublimation Phase)

- The sealed assembly goes into an oven
- Heat activates the ink (typically ~350–400°F again)
- The ink sublimates (solid → gas) and penetrates the softened powder coat

The pattern is not sitting on top—it’s infused into the coating layer.

Cooling & Film Removal

- After a set dwell time, the part is removed and cooled
- The vacuum is released
- The film is peeled off and discarded

What remains is:

- A fully transferred pattern embedded in the coating
- No physical film or layer left behind

Final Result

You now have:

- A powder-coated aluminum panel with a permanently infused pattern
- Appearance: wood, stone, corten steel, brushed metal, etc.
- Properties:
 - UV resistant
 - Weather resistant
 - Strong adhesion (won’t peel like laminates)
 - Good scratch resistance (limited by powder coat hardness)

Why This Process Is So Effective

- Combines powder coat durability with photorealistic patterns
- Vacuum ensures perfect contact, especially for:
 - Grooved panels
 - Extrusions
 - Complex fence profiles
